

VIDIT BHATNAGAR

Cloud & DevOps Trainee

viditbhatnagar53@gmail.com | +91-9528074459 | Ghaziabad, India | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

PROFILE

Cloud & DevOps enthusiast with a strong foundation in Linux system administration, scripting automation, and version control (Git/GitHub). Hands-on experience building automated monitoring tools using Bash, Cron, and systemd, backed by solid Python and SQL fundamentals for structured problem-solving and data handling. Comfortable with command-line tools, shell scripting, and building repeatable, automated workflows. Seeking a DevOps Trainee role to build deeper hands-on expertise in CI/CD, containerization, and cloud platforms.

TECHNICAL SKILLS

Operating Systems & Linux: Linux Fundamentals — command line, filesystem management, permissions, process & service management, networking, SSH

Automation & Scripting: Bash scripting, Cron job scheduling, systemd/systemctl, Python (Pandas, NumPy, Scikit-learn)

Version Control: Git & GitHub — branching, commits, pull requests, repository management

Cloud & DevOps Tooling (In Progress): AWS Cloud Fundamentals, Docker, CI/CD concepts

Databases: SQL / MySQL, ETL-style data pipelines, data validation

Tools: VS Code, journalctl, Power BI, Jupyter Notebook, Microsoft Office Suite

RELEVANT PROJECTS

Linux Server Health Monitor — Bash Automation

[github.com/Vidit-Bhatnagar/linux-server-health-monitor](#) | Bash | Linux | Cron | systemd

- Built a Bash script to monitor CPU, RAM, and disk usage, check SSH and Cron service status, and calculate overall system health (OK/WARNING/CRITICAL) using exit codes 0/1/2
- Automated timestamped daily health reports and a persistent alerts log via Cron running every 5 minutes, with execution verified through journalctl

SQL Data Cleaning & ETL Workflow — Global Layoffs Dataset

[github.com/VidbTheAnalyst/SQL-DataCleaning-Project](#) | MySQL | CTEs | Window Functions | Staging Tables

- Built a structured ETL-style pipeline in MySQL to extract, validate, and clean 2,361 records using a staging-table process, resolving duplicates, nulls, and inconsistent formats
- Applied CTEs, subqueries, and window functions for data transformation — structured data-handling patterns that mirror automation and infrastructure pipelines

Customer Churn Analysis & Prediction

[github.com/VidbTheAnalyst/customer-churn-analysis](#) | Python | SQL | Scikit-learn | Power BI

- Collected, cleaned, and processed a 7,043-record dataset using Python and SQL scripting, applying systematic, repeatable workflows
- Version-controlled the full project on GitHub, managing commits and documentation throughout development

E-Commerce Sales & Customer Analytics

[github.com/VidbTheAnalyst/Ecommerce-Analytics-Project](#) | Python | Pandas | MySQL | Power BI

- Processed 4,000+ transaction records with Python and SQL, building automated data-cleaning and reporting scripts
- Managed project versioning and collaboration workflow via Git and GitHub
